

Weldable tiles are used in cases where the steel it is applied to, has a chance to flex due to operational stresses, or when temperatures of above 80°C is encountered for extended periods of time.

Moffatt Supply offers an extensive range of weldable tiles in stock, or available 2 weeks from order date, in Canada and the USA. Quantities are available by the box(s) or pallet(s) to suit your needs.

Thicknesses IN STOCK range from ¼" thick, ½" thick, and 1" thick, and 2 week delivery for ¾" thick and 2" thick. We also supply custom manufactured sizes and thicknesses to suit your application.

All of our weldable tile includes a steel Insert that is pre-inserted into tile for ease of use. The ceramic cap is also included in the tile within the box.

Our ¼" thick weldable tile is manufactured with a smaller weld hole to prevent thermoshock and includes a precision steel weld insert and ceramic cap to cap the weld hole.

Moffatt Supply also offers installation services to install weldable tiles. This can be applied to customer supplied steel, or steel can be supplied as well, if customer supplied drawings are available.

We also custom manufacture custom sizes and thicknesses of weldable tile to suit a variety of applications. Please contact us for your requirements or questions at 780-435-1921 or [salesedm@moffattsupply.com](mailto:salesedm@moffattsupply.com).
